TITLE: POLYESTER RESIN COMPOSITION

Abstract (2):

CONSTITUTION: A composition obtained by incorporating 100pts.wt. polyester with 0.001∼10pts.wt. orthophosphoric ester expressed by the formula (R1, R2, R3 and R4 are 6∼15C aryl; R5 is arylene or isopropylidenediphenyl). If the amount of the orthophosphoric ester is 0.5wt% or more, the crystallization rate is remarkably improved. Hydroquinone tetraphenyl diphosphate, bisphenol A tetraresyl phosphate, etc. may be cited as the orthophosphoric ester. Preferably, a crystallization accelerator or reinforcing agent is incorporated further therein.
